STUDENT PLEDGE OF ACADEMIC INTEGRITY

As a student of Universiti Teknologi MARA (UiTM), it is my responsibility to act in accordance with UiTM's academic assessment and evaluation policy. I hereby pledge to act and uphold academic integrity and pursue scholarly activities in UiTM with honesty and responsible manner. I will not engage or tolerate acts of academic dishonesty, academic misconduct, or academic fraud including but not limited to:

- a. **Cheating:** Using or attempt to use any unauthorized device, assistance, sources, practice or materials while completing academic assessments. This include but not limited to copying from another, allowing others to copy, unauthorized collaboration on an assignment or open book tests, or engaging in any act or conduct that can be construed as cheating.
- b. **Plagiarism:** Using or attempts to use the work of others (ideas, design, words, art, music, etc.) without acknowledging the source; using or purchasing materials prepared by another person or agency or engaging in other behavior that a reasonable person would consider as plagiarism.
- c. **Fabrication:** Falsifying data, information, or citations in any academic assessment and evaluation.
- d. **Deception:** Providing false information with intend to deceive an instructor concerning any academic assessment and evaluation.
- e. **Furnishing false information:** Providing false information or false representation to any UiTM official, instructor, or office.

With this pledge, I am fully aware that I am obliged to conduct myself with utmost honesty and integrity. I fully understand that a disciplinary action can be taken against me if I, in any manner, violate this pledge.

Name : MUHAMMAD IQBAL BIN SUHAIMI

Matric Number : 2023467054

Course Code : IML208

Programme Code :-

Faculty / Campus : UiTM Kampus Sungai Petani

ACKNOWLEDGEMENT

First of all, I would like to thank Allah SWT, the Almighty for giving me the strength and patience to do this assignment. I was able to make progress on this assignment with minor distractions and difficulties.

Alhamdulillah, I extend my heartfelt gratitude to my parents for their unwavering support and encouragement in my educational journey. Thanks to the encouragement and love from my parents, without whom I could not have completed this assignment. Besides, I also want to say a thousand thanks to Sir Firdaus for teaching me about the Programming For Libraries . His learning method has improved my knowledge in this subject. Thank you for teaching me about knowledge that can give me ideas to complete this assignment.

Project Name: Grab Car Booking System

File name : grabcar.py

Prompt Data :

- i. Register User
- ii. Register Driver
- iii. Book Ride
- iv. Complete/Delete/Show Bookings and Exit

Function :

- i. Create data

The screenshot shows a window titled "GrabCar Booking System" with standard Windows window controls (minimize, maximize, close). The form is divided into several sections for user registration and booking management. The "Register User" section is currently active, showing input fields for User ID (020402), User Name (ammad Adam Bin Alif), and User Phone (016-337 5790). Below these fields are buttons for "Register User", "Register Driver", "Book Ride", "Complete Ride", "Delete Booking", and "Show Bookings". The "Book Ride" section includes fields for User ID (Book), Pickup Location, and Destination. The "Complete/Delete" section includes fields for Booking ID (Complete) and Booking ID (Delete).

User ID:	020402
User Name:	ammad Adam Bin Alif
User Phone:	016-337 5790
<input type="button" value="Register User"/>	
Driver ID:	
Driver Name:	
Car Model:	
<input type="button" value="Register Driver"/>	
User ID (Book):	
Pickup Location:	
Destination:	
<input type="button" value="Book Ride"/>	
Booking ID (Complete):	
<input type="button" value="Complete Ride"/>	
Booking ID (Delete):	
<input type="button" value="Delete Booking"/>	
<input type="button" value="Show Bookings"/>	

ii . Read data

GrabCar Booking System

User ID:	020402
User Name:	ammad Adam Bin Alif
User Phone:	016-337 5790
<input type="button" value="Register User"/>	
Driver ID:	
Driver Name:	
Car Model:	
<input type="button" value="Register Driver"/>	
User ID (Book):	
Pickup Location:

Booking ID (Delete):	
Delete Booking	
Show Bookings	

User Muhammad Adam Bin Alif registered successfully.

Strength:

1. **Modular Structure:** The code is well-organized and modular, with clear separation of functions for different tasks such as registering users, registering drivers, booking rides, and managing bookings. This makes the code easier to read and maintain.
2. **User-Friendly Messages:** The code provides user-friendly messages for actions like successful registration, booking completion, and error handling (e.g., when a user or driver is not registered).
3. **Comprehensive Functionality:** The code covers all essential functionalities of a ride-booking system, including user and driver registration, ride booking, completion, deletion of bookings, and showing all bookings.
4. **Loop for Continuous Operation:** The while True loop allows the program to run continuously, handling multiple user requests until the user chooses to exit.
5. **Input Validation:** The code checks if a user is already registered by phone number before adding them, preventing duplicates. It also ensures that only registered users can book rides.

Kaizen (Room for improvement) :

1. **Error Handling:** While there are basic checks for some errors, more comprehensive error handling could be added. For example, handle situations where non-integer input is provided where an integer is expected (e.g., booking ID).

2. **Data Persistence:** Currently, the system does not save data between runs. Consider implementing a way to persist data, such as saving to a file or database, so that information is not lost when the program is closed.

3. **Scalability:** As the number of users, drivers, and bookings increases, the linear search method used in some functions (next and list comprehensions) may become inefficient. Consider using more efficient data structures or indexing.

4. **Improved User Experience:** Enhance the user experience by adding features like searching for specific bookings or users, updating user or driver information, and more detailed booking information (e.g., timestamps).

5. **Security Measures:** Implement basic security measures, such as input sanitization, to prevent injection attacks or accidental errors from unsanitized inputs.
